

REMARKS/ARGUMENTS

The Examiner rejected claims 6-8 as being unpatentable over Windows Explorer and Lipson et al., U.S. Patent Number 6,463,426.

As noted by the Examiner, Windows Explorer provides the ability to open a folder that contains images. The Examiner failed to explain how the list of image content in folder 09823219 was the basis for the Examiner determining that the content of folder 09500449 was potential desirable additional image content for the user. Instead, the selection is by the user and apparently at random.

Lipson et al. discloses a searching mechanism, but fail to disclose the claimed list management system.

Claim 6 patentably distinguishes over the cited art by claiming determining potential desirable additional image content for the user based upon a comparison between the list and the additional image content, free from the additional image content being selected by the user for inclusion in the list.

In direct contrast, the content in Windows Explorer was selected by the user, was not based upon a comparison to the list, nor not selected by the user for inclusion in the list.

Claim 6 further patentably distinguishes over the cited art by claiming the system adds the additional content to the list by a user interaction with said at least one of the additional digital image and the additional digital video after the indicating.

Applicant respectfully requests that a timely Notice of Allowance be issued in this case.

Applicant submits that no fees are required for entry of this Amendment. If any fees are deemed necessary, however, the Commissioner is authorized to charge the requisite fee to Deposit Account No. 03-1550.

Respectfully submitted,

CHERNOFF, VILHAUER, McCLUNG & STENZEL
